IT Change Request Form

AF-BITS-F-041 | Revision 01 | Eff. Jul-09-2025

PROJECT DETAIL	
Change Request Type	XML file Update
Project Name	Modification on Integration Payment File M3 XML file setup to HSBC
CR Number	GC-CR-26-021
CR Request Date	9 September 2026
System Name	Infor Cloud
Module	Accounts Payable
Cost Center to Charge the CR	GCIID Division 101-105 ; GCSIID Division 106-107

GENERAL INFORMATION (To be filled by Change Requestor)			
Raised By	Diana Farida	Role / Position	Accounting Assistant Manager
Change Name	Modification on Integration Payment File M3 XML file setup to HSBC		
Change Details	**Background:** The AP Shared Service / Gold Coin AP team frequently encounters Host-to-Host (H2H) payment failures where transactions successfully process in M3 but the corresponding payment file fails to generate in HSBCNet. (e.g., Tickets ID-038 (previously GCI-2220), ID-039, and ID-109). **Impact on Business:** This issue directly hinders weekly Paid-On-Time (POT) operational KPIs and disrupts vendor payment schedules **Risk Exposure:** The previous workaround relied on closing tickets by performing manual file uploads to HSBCNet. Eliminating these manual interventions is critical to mitigate severe human error risks, such as duplicate payments, incorrect payee selection, or incorrect payment amounts. **Root Cause Identified :** Consultant Name : Jaliya Hewage Ticket : GCI-2220 H2H Payment Successfully Processed in M3 but Payment File Not Generated to HSBCNet (Proposal No. 8000009370) For Indonesia import payments, HSBC requires the unstructured remittance information field (<Ustrd>) to follow a strict 105-character format (2012//Invoice1(amount)Invoice2(amount)...). While forward slashes (/) are allowed in invoice numbers, HSBC automatically rejects files if a / happens to fall exactly on character positions 36 or 71 (the starting characters of the second and third 35-character sub-sections) Reference File : 0.ABOITIZ Group Mail - Fwd_ GCI-2220 H2H Payment Successfully Processed in M3 but Payment Fil... 3 . PP & ACH BI FAST XML V3-File Spec, Sample & Regulatory Reporting for Indonesia - Last Update ... 1. ABOITIZ Group Mail - RE_ EXTERNAL_ Re_ Investigation Request – Payment Proposal 800000947... 2. ABOITIZ Group Mail - RE_ EXTERNAL_ Re_ Re_ Investigation Request – Payment Proposal 80000...		

	Scope of Change: Manually updating the Integration Payment File M3 XML file setup to HSBC based on The HSBC ISO20022 **Change Details:** 1. Logic / Logic Validation Fix in M3 payment output engine (APS130) to govern how invoice strings are concatenated into the <Ustrd> tag. 2. Position-Specific Character Handling Ensure the string concatenation logic actively checks character indices and prevents the forward slash symbol (/) from landing at index 36 or index 71 within the 105-character limits. 3. Formatting Adherence Ensure the <Ustrd> tag strictly complies with HSBC Indonesia's XML spec (PP & ACH BI FAST XML V3) Max String Length: 105 characters (divided into three 35-character logical blocks). Structure: 2012//Invoice1(amount)Invoice2(amount)... Rule Enforcement: Disallow / at character 36 (Start of Section 2) and character 71 (Start of Section 3).

IMPACT ANALYSIS (To be filled by Change Requestor & BITS)	
Impacted Severity	[/] Major [ ] Minor
Impact on Scope	To be determined by Consultants
Impact on Schedule	To be determined by Consultants
Impact on Cost	To be determined by Consultants
Risk Analysis:	Business Risk: Payment Risk due to manual intervention Technical Risk:
Remarks:	

RECOMMENDATION (To be filled by BiTS)
[ ] Canceled [ ] Postponed [/] Perform Immediately
Reasons : Risk of double payment due to manual intervention
Recommendation:

Setup together with ISO requirements for HSBC and the change should be implemented for all countries with HSBC payments.
